

CABIN AIR FILTERS

Cabin filters are designed to keep dirt, dust, mold, mildew, pollen and other debris (leaves, insects, etc.) from entering the passenger compartment through the heating, A/C and defrosting systems.

Empowered with activated charcoal
and anti-bacterial coated material
to eliminate odors and
harmful gases resulting
from mold build-up.

Designed to
retain virtually
all pollen and
unwanted particles.

Cabin filters should be checked
annually to insure your filter is
clean & free of debris.
